

The Pocket Rigger Kit Model PRK-1

The Pocket Rigger Kit (PRK-1) is designed for military and civilian use as a dedicated field rigger tool kit for the packing and/or repacking of reserve and emergency parachute systems.

Conceived and designed by Sandy Reid, Master Rigger and DPRE, the PRK-1 is a compact and easily transportable tool kit. Weighing only 2.0 lbs (.9kg), it has only those tools and replacement parts such as closing loops, needed by the typical rigger to repack an emergency reserve after use or to assemble and pack a new personnel parachute assembly.

Military free fall teams will find the PRK-1 particularly well suited for carrying with them on specialized missions or deployments. The team rigger now has the tools necessary to allow them to support their unit mission in the field at all times.

Included in the PRK-1 are 25 specialized tools including 3 custom-designed and manufactured to exacting specifications to integrate into the tool case. In addition, there are replacement reserve and main closing loops, pull-up cords, data cards, tacking and seal thread, and lead seals to round out the complete kit.

The PRK-1 comes complete with all the components listed. For FAA or foreign certificated riggers that require a seal press, a high quality, compact seal press is offered as a cost option that is designed to fit into the PRK-1.
